Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/705,212

Applicant(s)

DAVIS, STEVE

Examiner

Jalatee Worjloh

Art Unit

3621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 November 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-31 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-31 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-31 have been examined.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 10 and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by US Publication No. 2005/0021781 to Sunder et al.

Referring to claim 1, Sunder et al. disclose receive an authentication request from a cardholder system (i.e. client device)(see paragraphs [0005] & [0007]), forward the authentication request to an access control server (see paragraph [0008]), relay authentication information between the access control server and the cardholder system receive an authentication response from the access control server and forward the authentication response to the cardholder system (see paragraphs [[0010] & [0011]).

Claims 10 and 19 are rejected on the same rationale as claim 1 above.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3621

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2, 3, 9, 11, 12, 18, 20 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sunder et al. as applied to claims 1 and 10 above, and further in view of US Publication No. 2003/0046541 to Gerdes et al.

Referring to claim 2, Sunder et al. disclose an electronic commerce card authentication system (see claim 1 above). Sunder et al. do not expressly disclose the authentication response is adapted to be analyzed by a merchant system. Gerdes et al. disclose the authentication response is adapted to be analyzed by a merchant system (see paragraph [0014] – the authentication server sends a confirmation of the user identity to the service provider. Based on the confirmation, the service provider finally grants service access to the user). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Sunder et al. to allow the merchant system to analyze the authentication response. One of ordinary skill in the art would have been motivated to do this because it provides authentication of a user to a service provider (see paragraph [0010] of Gerdes et al.).

Referring to claim 3, Sunder et al. disclose an electronic commerce card authentication system (see claim 1 above). Sunder et al. do not expressly disclose wherein the central transaction server is adapted to forward a copy of the authentication response to an authentication history server to be archived. Gerdes et al. disclose the central transaction server is adapted to forward a copy of the authentication response to an authentication history server to be archived (see paragraph [0057]). At the time the invention was made, it would have been

Art Unit: 3621

obvious to a person of ordinary skill in the art to modify the system disclose by Sunder et al. to include a copy of the authentication response to an authentication history server. One of ordinary skill in the art would have been motivated to do this because it provides a history of authentication transaction (see paragraph [0057] of Gerdes et al.).

Referring to claim 9, Sunder et al. disclose the electronic commerce card authentication system (see claim 1 above). Sunder et al. do not expressly disclose the central transaction server is adapted to initiate a charge request via a card association network in response to receiving an authentication response from the access control server. Gerdes et al. disclose the central transaction server is adapted to initiate a charge request via a card association network in response to receiving an authentication response from the access control server (see paragraph [0014]). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Sunder et al. to include the central transaction server is adapted to initiate a charge request via a card association network in response to receiving an authentication response from the access control server. One of ordinary skill in the art would have been motivated to do this because it provides an additional level of security.

Claims 11 and 20 are rejected on the same rationale as claim 2 above.

Claims 12 and 21 are rejected on the same rationale as claim 3 above.

Claims 18 and 27 are rejected on the same rationale as claim 9 above.

Art Unit: 3621

6. Claims 4-6, 13-15, 22-24, and 28 -31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sunder et al. as applied to claims 1, 10 and 14 above, and further in view of US Publication No. 2004/0254848 to Golan et al.

Referring to claims 4 and 5, Sunder et al. disclose the electronic commerce card authentication system (see claim 1 above). Sunder et al. do not expressly disclose wherein the central transaction server is further adapted receive a verifying enrollment request from a directory server, and to send a verifying enrollment response to the directory server; wherein the central transaction server is adapted to send the verifying enrollment response in response to a query to the access control server. Golan et al. disclose wherein the central transaction server is further adapted receive a verifying enrollment request from a directory server, and to send a verifying enrollment response to the directory server; wherein the central transaction server is adapted to send the verifying enrollment response in response to a query to the access control server (see paragraphs [0094]-[0097] & claims 5,6). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Sunder et al. to include the system wherein the central transaction server is further adapted receive a verifying enrollment request from a directory server, and to send a verifying enrollment response to the directory server; wherein the central transaction server is adapted to send the verifying enrollment response in response to a query to the access control server. One of ordinary skill in the art would have been motivated to do this because provides an additional level of verification, thereby securing the system.

Referring to claim 6, Sunder et al. disclose the electronic commerce card authentication system (see claim 1 above). Sunder et al. do not expressly disclose the central transaction server

Art Unit: 3621

is adapted to send the verifying enrollment response to the directory server with or without querying the access control server, and is further adapted to query the access control server in response to receiving an authentication request. Golan et al. disclose the central transaction server is adapted to send the verifying enrollment response to the directory server with or without querying the access control server, and is further adapted to query the access control server in response to receiving an authentication request (see paragraphs [0099] & [0100]). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Sunder et al. to include the system wherein the central transaction server is adapted to send the verifying enrollment response to the directory server with or without querying the access control server, and is further adapted to query the access control server in response to receiving an authentication request. One of ordinary skill in the art would have been motivated to do this because provides an additional level of verification, thereby securing the system.

Claims 13, 22, 28, and 30 are rejected on the same rationale as claim 4 above.

Claims 14 and 23 are rejected on the same rationale as claim 5 above.

Claims 15 and 24 are rejected on the same rationale as claims 6 above.

Referring to claims 29 and 31, Sunder et al. disclose the electronic commerce card authentication system (see claims 28 and 30 respectively above). Sunder et al. do not expressly disclose modifying the verifying enrollment request from a directory server, and forwarding the modified verifying enrollment response to the directory server. Golan et al. disclose receiving a verifying enrollment request from a directory server, and to send a verifying enrollment response to the directory server and sending the verifying enrollment response in response to a query to

Art Unit: 3621

the access control server (see paragraphs [0094]-[0097] & claims 5,6). Golan et al. do not teach the request being modified; however, the concept of modifying data is well known in the art of data processing. Thus, at the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Sunder et al. to include the steps of disclose receiving a verifying enrollment request from a directory server, and to send a verifying enrollment response to the directory server and sending the verifying enrollment response in response to a query to the access control server. One of ordinary skill in the art would have been motivated to do this because provides an additional level of verification, thereby securing the system.

7. Claims 7, 16 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sunder et al. as applied to claims 1, 10 and 19 above, and further in view of US Publication No. 2001/0029496 to Otto et al.

Referring to claim 7, Sunder et al. disclose the electronic commerce card authentication system (see claim 1 above). Sunder et al. do not expressly disclose the authentication request includes a pseudonym corresponding to an electronic commerce card account number and previously created by the central transaction server (see paragraph [0027] – [0029] –the user can submit the anonymous identifying information to the merchant; the merchant submits the request the banking network who then forwards the request to the financial institution that issued the anonymous card). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Sunder to include a pseudonym corresponding the an electronic commerce card account number in the authentication request, the

Art Unit: 3621

pseudonym previously created by the central transaction server. One of ordinary skill in the art would have been motivated to do this because it secures user's identity by providing a means for users to anonymously purchase goods and services over a network (see Otto et al. paragraph [0007]).

Claims 16 and 25 are rejected on the same rationale as claim 7 above.

8. Claims 8, 17 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sunder et al. as applied to claims 1, 10 and 19 above, and further in view of US Publication No. 2002/0116341 to Hogan et al.

Referring to claim 8, Sunder et al. disclose the electronic commerce card authentication system (see claim 1 above). Sunder et al. do not expressly disclose the authentication request includes a pseudonym previously created by a merchant system that corresponds to an electronic commerce card account number. Hogan et al. disclose the authentication request includes a pseudonym previously created by a merchant system that corresponds to an electronic commerce card account number (see paragraph [0025]). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the system disclose by Sunder et al. to include a pseudonym previously created by the central transaction server. One of ordinary skill in the art would have been motivated to do this because it protects messages and information being transmitted during a transaction (see Hogan et al. paragraph [0016]).

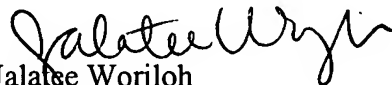

Claims 17 and 26 are rejected on the same rationale as claim 8 above.

Art Unit: 3621

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jalatee Worjloh whose telephone number is (571) 272-6714. The examiner can normally be reached on Mondays-Thursdays 8:30 - 7:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Trammell can be reached on (571) 272-6712. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300 for Regular/After Final Actions and 571-273-6714 for Non-Official/Draft.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
